

WHAT IS WRONG IN THE FOLLOWING VBA code:

If Worksheet.name(wsName) <> "Employment Search" Then

It looks like there is a syntax error in the provided VBA code. The correct syntax for checking the name of a worksheet in VBA should be:

vba  Copy code

```
If wsName <> "Employment Search" Then '  
Your code here End If
```

In this corrected code, **wsName** is assumed to be a variable that holds the name of the worksheet you want to compare. If **wsName** is actually a worksheet object, you would use **wsName.Name** to access its name property:

vba  Copy code

```
If wsName.Name <> "Employment Search" Then  
' Your code here End If
```

Make sure to adjust the code according to the intended behavior and usage of **wsName**.
