Worksheet.Name property (Excel)

Article • 09/12/2021

Returns or sets a **String** value that represents the object name.

Syntax

expression.**Name**

expression A variable that represents a **Worksheet** object.

Example

The following code example sets the name of the active worksheet equal to today's date.

```VB
' This macro sets today's date as the name for the current sheet
Sub NameWorksheetByDate()
    'Changing the sheet name to today's date
    ActiveSheet.Name = Format(Now(), "dd-mm-yyyy")

    'Changing the sheet name to a value from a cell
    ActiveSheet.Name = ActiveSheet.Range("A1").value
End Sub
```
